A Brief Overview To Users

Welcome to our final Project!

A user can use this application to create and manage software projects.

A user can create a login upon first use, and then continue to use this to login to the application in the future.

Once a user is logged in, then they will be presented with a project page.

On this project page, a user can either create a new project with a name and ID, or a user can log into an existing project (created by either that user or another user) to upload their new code given they possess the respective ID.

Furthermore, once a user enters a project, they can check out certain hardware sets to be able to test their code.

The hardware set page should give an option to check in or check out hardware sets based upon the availability.

Also, there is a page where users can directly download datasets from physionet in order to test their own code.

There should also be functionality to logout, switch users, switch projects, go back a page, etc. on each page.

So, users should get started!

Minimum Hardware and Software Requirements

All you need is access to a web application through google chrome, safari, firefox, etc. with a running network.

How to Start the System

Begin by clicking on this link to our app!

Link to Heroku App: <https://final-project-group-8.herokuapp.com/>

Walkthrough of the Application and Screenshots explaining Main Features of the System

First, one will sign-up/login.

Login Form

Username

Password

Login

Signup Form

Username

Password

Sign Up

Below is an example of a possible input.

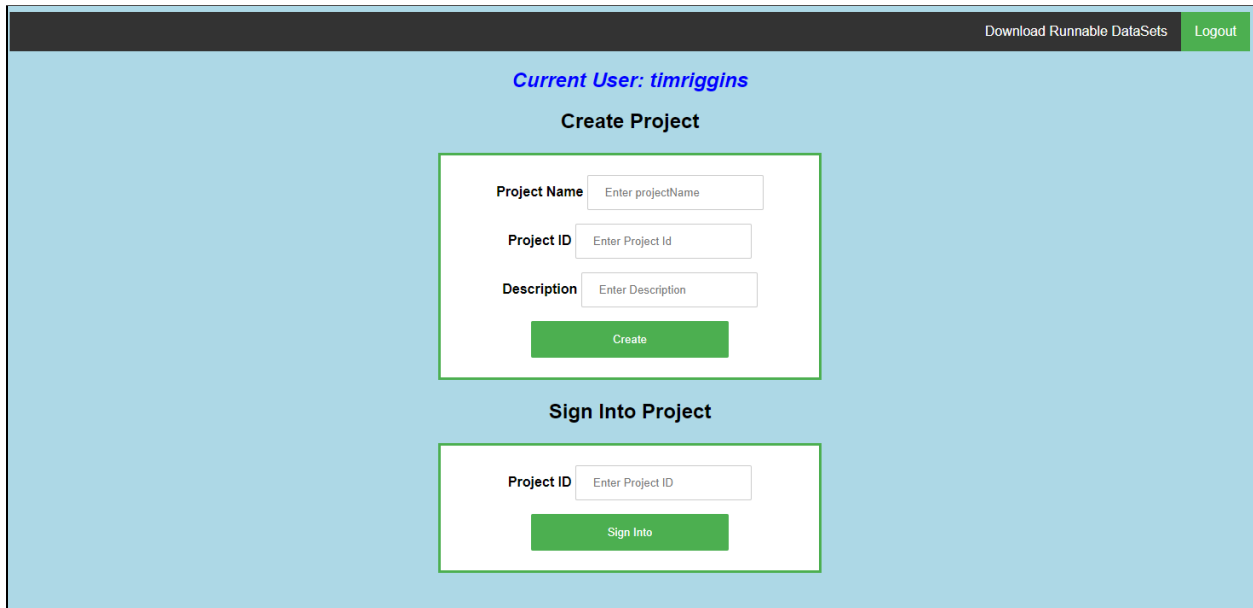

Login Form

Username

Password 

Login

Next, you will be presented with the project login page. Verify that your username is at the top!

The screenshot shows a web interface with a dark header bar containing the links "Download Runnable DataSets" and "Logout". Below the header, the text "Current User: timriggins" is displayed in blue. The main content area has a light blue background and contains two sections. The first section, titled "Create Project", includes three input fields labeled "Project Name", "Project ID", and "Description", each with a placeholder text "Enter projectName", "Enter Project Id", and "Enter Description" respectively. Below these fields is a green "Create" button. The second section, titled "Sign Into Project", includes a single input field labeled "Project ID" with a placeholder text "Enter Project ID", and a green "Sign Into" button below it.

You can either create a project or sign into one. Below is an example of a possible Project ID input to sign into an existing project.

This is a close-up of the "Sign Into Project" section from the previous screenshot. It features a large green border around the form area. Inside, the text "Project ID" is followed by an input field containing the text "0001". Below the input field is a green "Sign Into" button.

Next, you will be presented with the hardware sets. You can either check out or check in sets based upon the availability of each hardware set displayed at the top. You will input the number you want checked in or checked out as well as the Project ID of the project that you are in.

Download and Test with DataSets from Physionet!

[Abdominal and Direct Fetal ECG Database:](#)
Multichannel fetal electrocardiogram recordings obtained from 5 different women in labor, between 38 and 41 weeks of gestation.

[AF Termination Challenge Database:](#)
ECG recordings created for the Computers in Cardiology Challenge 2004, which focused on predicting spontaneous termination of atrial fibrillation.

[ANSI/AAMI EC13 Test Waveforms:](#)
The files in this set can be used for testing a variety of devices that monitor the electrocardiogram. The recordings include both synthetic and real waveforms.

[BIDMC Congestive Heart Failure Database](#)
Long-term ECG recordings from 15 subjects with severe congestive heart failure.

[BIDMC PPG and Respiration Dataset:](#)
ECG signals extracted from the MIMIC-II Matched Waveform Database, with manual breath annotations added by annotators using impedance respiratory signal.

[Brno University of Technology ECG Quality Database \(BUT QDB\):](#)
The database is intended for the development and objective comparison of algorithms designed to assess the quality of ECG records. It also enables objective comparison of results between authors.

[CHB-MIT Scalp EEG Database](#)
EEG recordings from pediatric subjects with intractable seizures, collected at the Children's Hospital Boston.

[CiPA ECG Validation Study:](#)
ECG effects of ranolazine, verapamil, lopinavir+ritonavir, chloroquine, dofetilide, diltiazem, and dofetilide+diltiazem in a small clinical study.

[Combined measurement of ECG, Breathing and Seismocardiograms:](#)
ECG and seismocardiogram data collected from 20 presumed healthy volunteers.

[Congestive Heart Failure RR Interval Database:](#)
This database includes beat annotation files for 29 long-term ECG recordings of subjects aged 34 to 79, with congestive heart failure (NYHA classes I, II, and III).

After all of this, at the top, there are selections to return back a page, switch project, or logout. Now, it is your turn to play around with our application for your best use!

Explanation of Error Messages

There could occur error messages based on types of input.

For example, if you input the wrong login, there can appear “Invalid Password” or “Invalid Username,” which is self-explanatory. Also, if you attempt to sign-up with an existing username, the error message “Username taken” will be displayed.

Login Form

Invalid Password!

Username

timriggins

Password

•••

Login

Also, if you enter a Project ID that does not exist, it will alert “ProjectID not found,” and if you create a project with an existing ID, the “ProjectID taken” error message will be displayed.

The screenshot shows a web interface for creating a project. At the top, it says "Current User: timriggins" in blue. Below that is the title "Create Project" in bold black. A red error message "ProjectID taken!" is displayed. The form contains three input fields: "Project Name" with the value "ExampleProject", "Project ID" with the value "0001", and "Description" with the value "This is an example.". A green "Create" button is at the bottom.

Furthermore, the hardware set page should alert with errors that display “valid” or “invalid” based upon checkout and checkin requests. Additionally, the correct Project ID must be entered with every checkin and checkout request, else the “Please enter the correct Project ID” error message will be displayed.

The screenshot shows a web interface for checking out hardware sets. The title is "Checkout Hardware Sets" in bold black. A red error message "Please enter the correct Project ID!" is displayed. The form has two sections. The first section has a "4" in a text box, followed by a green link "Project ID: 0001", a text box with "00000", a "Checkout1" button, and a text box "Enter Amount for Set2". The second section has a green link "Project ID: 0001", a text box "Enter ID", and a "Checkout2" button.
